

std::false\_type

```
graph BT; A[wjr::__uniform_random_bit_generator_impl<Engine, typename>] --> B[std::false_type];
```

The diagram illustrates an inheritance relationship. At the bottom is a gray rectangular box representing the base class `wjr::__uniform_random_bit_generator_impl<Engine, typename>`. It is divided into three horizontal sections, with the top section containing the class name. Above this box is a white rectangular box representing the derived class `std::false_type`, also divided into three horizontal sections, with the top section containing the class name. A blue arrow points from the top center of the gray box to the bottom center of the white box, indicating that `std::false_type` inherits from `wjr::__uniform_random_bit_generator_impl<Engine, typename>`.

wjr::\_\_uniform\_random
