

std::exception

```
classDiagram
    class std_exception["std::exception"]
    class wjr_bad_optional_access["wjr::bad_optional_access"]
    wjr_bad_optional_access --|> std_exception
```

The diagram shows two class boxes. The top box, labeled 'std::exception', has three horizontal compartments: the top one for the name, and two empty ones below it. The bottom box, labeled 'wjr::bad\_optional\_access', has three horizontal compartments: the top one for the name, an empty middle one, and a bottom one containing '+ what()'. A blue arrow with an open triangular head points from the top of the bottom box to the bottom of the top box, indicating inheritance.

wjr::bad\_optional\_access

+

what()
