

std::false\_type

```
graph BT; A[wjr::optional_detail::is_not_nullopt_t] --> B[std::false_type];
```

The diagram illustrates an inheritance relationship. At the bottom is a grey rectangular box representing the base class `wjr::optional_detail::is_not_nullopt_t`. It is divided into three horizontal sections: the top section contains the class name, the middle section is empty, and the bottom section is empty. Above this box is a white rectangular box representing the derived class `std::false_type`. It is also divided into three horizontal sections: the top section contains the class name, the middle section is empty, and the bottom section is empty. A blue arrow points from the top edge of the grey box to the bottom edge of the white box, indicating that `std::false_type` inherits from `wjr::optional_detail::is_not_nullopt_t`.

wjr::optional\_detail  
::is\_not\_nullopt\_t< nullopt\_t >
